## Introduction

This software is a simple Lightroom plugin to produce a printable pdf page that contains the label associated with the selected photo. It is composed of 2 different parts. The LR plugin code written in LUA and a service listening for requests (localhost default port 8087).

Documentation on LR Plugin development can be found on [Lightroom official documentation](#)

## Getting started

### Prerequisites

- Java (minimum version 17) must be installed and java must be in path.

## Starting and Stopping Easy Label Service

When your plugin is installed you should be able to start and stop the service from Lightroom interface. Service listens on port 8087.

- From Lightroom interface go to File/External module manager and load the plugin.
- External modules extras/LR Easy Label Print/Start server to start the server

Some firewall can block command from Lightroom. In that case you have to start the service manually.

## Workaround

- Locate the service jar (LREasyLabelPrint.jar).
- Open a Powershell cmd.
- Go to the directory where is located the jar file.

- Run the command :

```
java -jar "-Dspring.profiles.active=local" LREasyLabelPrint.jar
```

## Printing label

From Library / External module extra
